

OIL & GAS DIVISION

Engineering products. New regional pathways.

Manufacturer representation discussions for piping, flow control, sealing and process equipment.

TECHNICAL PRODUCTS. REGIONAL OPPORTUNITIES.

DIVISION OVERVIEW

A focused industrial pathway.

PEAK is inviting specialist manufacturers to discuss defined, project-led representation in the UAE, GCC and Malaysia.

01 Assess the fit

Review product differentiation, certifications and existing territories.

02 Define the scope

Agree product families, markets and commercial responsibilities.

03 Develop opportunities

Coordinate technical introductions and qualified enquiries.

04 Support follow-through

Work with the manufacturer and licensed local parties as required.

PRODUCT FAMILIES

Piping and flow systems.

Illustrative categories - actual products and specifications come from the appointed manufacturer.

Pipes & tubes

Seamless, welded and specialty piping.

Fittings & flanges

Butt-weld, forged and flanged connections.

Valves & actuation

Isolation, control and automation packages.

Gaskets & bolting

Sealing and bolting for critical joints.

PROCESS EQUIPMENT

Pumps and instrumentation.

Specialist equipment requires OEM selection, certification and an agreed technical-support route.

Process pumps

Centrifugal and specialist-duty packages.

Instrumentation

Pressure, temperature and manifolds.

Valve automation

Pneumatic, hydraulic and electro-hydraulic systems.

Industrial fastening

Traceable bolting and connection components.

QUALIFICATION

Start with duty and service.

Oil and gas enquiries require precise operating conditions, material requirements and documentation.

01 Application data

Service fluid, pressure, temperature, duty and environment.

02 Materials & standards

Grades, classes, API / ASTM / ASME or project requirements.

03 Certification

Traceability, inspection, test records and hazardous-area needs.

04 Support route

OEM engineering, commissioning, warranty and after-sales responsibility.

TARGET APPLICATIONS

Critical industrial service.

Initial discussions focus on specialist applications where manufacturer engineering creates clear value.

01 Pipelines

Isolation, control, actuation and connected piping components.

02 Refining & petrochemical

Flow control and process equipment for demanding duties.

03 Gas & LNG

Application-specific components and instrumentation.

04 Power & process industries

Related industrial applications evaluated product by product.

REGIONAL PATHWAY

UAE, GCC and Malaysia.

These are target ecosystems, not claimed clients or existing approvals.

01

UAE & Abu Dhabi

Engage EPC and project supply chains; ADNOC approval is not implied.

02

Wider GCC

Country-specific project and commercial evaluation.

03

Malaysia

PETRONAS eligibility and local commercial requirements must be assessed.

04

Manufacturer origins

North America, South America, the UK and Europe.

MANUFACTURER PARTNERSHIPS

Your products. Our regional focus.

Discuss oil and gas manufacturer representation, project development and market access for the UAE, GCC and Malaysia.

PEAK FIXING SOLUTIONS
